
A: germline or somatic truncating/splice BRCA1/2 variant (272 sequenced patients). Odds ratios are for being labelled non-responder; values below 1 point toward response. Each label uses all platinum-treated patients in whom it is determinate. A–C: * 95% CI excludes 1. D: r > 0 = higher score in non-responders; * BH q < 0.05 within label (5 covariates). Lower CI bounds below 0.03 are drawn at 0.03.
